CLIPS -- QUOTES -- COMMENTS

"E" - 8

November 1, 1955

CONTENTS: PAGES:

"Further Evidence Of An Ether". . . . . - 1
(by Associate C.F. Krafft)

Miscellaneous: "Little Green Men" . . . . - 2

"More About Vitamin C" . . . . . 3 - 4
(letter from Assoc. Rev. J.H.L.)

TELONIC RESEARCH CENTER . . . . . - 5
- and -
The National Fluoridation News (anti-f.). . - 5
(also)
"Psychism" of Jonathan Swift . . . . . - 5

"Comprehensive Catalogue" (issued by B.R.A.) - 6

The Gerson Treatment for Cancer . . . . . - 7
(by Assoc. Mrs. H.M. Graham)-("PREVENTION")

B.S.R.A. Items of Importance . . . . . - 8

**** ***** *****

"CLIPS, QUOTES, and COMMENTS" is issued on the first and fifteenth of each month, by the Borderland Sciences Research Associates, at: 3524 Adams Avenue, San Diego 1, California.

Twelve issues (6 months) for $5.00; six issues (3 mos.) for $2.50; two issues for $1.00. Contains mostly short articles & miscellaneous material, supplementary to the ROUND ROBIN (B.S.R. bi-monthly).

FURTHER EVIDENCE OF AN ETHER

by C. F. KRAFFT.

In my previous article on the existence of an ether (Round Robin XI-3, pgs. 13-14) the subject was treated from an astronomical standpoint, and it will now be considered from the standpoint of the Sagnac experiment, which is just as important as the Michelson-Morley experiment, though not as well known as the latter.

The Sagnac experiment was first performed in France, in 1913, in an effort to disprove Einstein's theory of relativity, and with minor variations has been repeated several times since then, but always with the same positive results. It consisted of splitting a beam of monochromatic light into two component beams which were sent in opposite directions around the periphery of a turntable by means of mirrors, until they met again at the opposite end of the table, so as to produce interference fringes which were recorded on a photographic plate.

When the table with all the apparatus on it was slowly rotated, the interference fringes were shifted by an amount equal to what the shift would be if the light waves travelled in a medium that was stationary relative to the earth. As long as the table remained stationary, the light waves in the two component beams would traverse the same distance - namely, half the circumference of the table. As soon as the table was rotated, however, the light waves of one beam would have to traverse a greater distance than those of the other beam, because the photographic plate on which the interference fringes were recorded would then be moving toward the light waves of one beam and away from those of the other beam. Since the time of travel in each beam must remain the same, any difference in the length of the two paths would have to result in a displacement of the interference fringes in the one direction or the other.

The same positive result was obtained regardless of whether the source of light was carried by the turntable, or was on a stationary support adjacent to the turntable, which rules out any attempted explanation based on the movement of the source of light. The only possible explanation for the shifting of the interference fringes when the table is rotated, is that the light waves of the two component beams travel in a medium - namely, an ether - which is stationary relative to the earth, but more specifically relative to the earth's gravitational field, and which does not partake to any measureable extent of the rotation of the turntable.

The Sagnac experiment is therefore in complete agreement with George Stokes interpretation of the Michelson-Morley experiment, because the gravitational field of the turntable is negligible in comparision with the gravitational field of the earth.

C.F.K.

- -

Contemporary concepts of the ether are of extreme importance, and especially (at present) in their bearing on the phenomena of the aeroforms and many related happenings of an etheric nature. For this reason the article by Dr. Krafft may be reprinted in our Round Robin XI-4 -(Nov.-Dec. next).

A 60-page printed booklet, THE ETHER AND ITS VORTICES, by C.F. KRAFFT, may be obtained from the author at a nominal price of $1.00: Route 2, Box 687, Annandale, Virginia.

MISCELLANEOUS:

"LITTLE GREEN MEN": These curious beings have been reported from many countries, have apparently caused no harm to anyone, but cause fright and apprehension by their grotesque appearance and eccentric actions. The Probert Control Natalli, questioned about this, said in substance:

> 'The Green Men are also space beings, and hence construct and operate the Discs or 'Saucers' much as do the other space entities now visiting your earth. Yet they are more in the nature of Elementals. They are mischievous but not malicious, inquisitive and imitative. They are related to the Space People in about the same sense that your earth elementals are related to humans. Elementals are not ex-carnate humans; they do not belong to the order of human evolution. The universe swarms with life in a multitude of forms. '

Questioned about numerous recent air disasters and any possible connection with the aeroforms, the Control said only: 'There is sometimes a relationship. The magnetic conditions are being tampered with. Not all the space people are well-disposed toward humans or toward each other. Not all is milk and honey among them...

It is hard to say whether scientists, or the public, or publicists are the most ignorant on the subject of Elementals - or the most unwilling to learn anything about it. The subject, of course, belongs in the field of occult studies - which itself is enough to discredit it a priori with all sane-and-sapient Westerners. But for the tenth-of-one-per-cent who are receptive I might quote the references in S.D., Vol. III, page 95: references are to Vols. I & II:

> Vol.1 pg 210 -- & 1, 691, 693 -- II,pg 286 -- I pg 313 -- II, pg 403 -- II pg 445 -- II, pg 37 -- I, pg 313 -- II, pg 285 -- I pg 207 -- II pg 107 -- I pg 297 - I, pg 255 -- & pg 693 -- I pg 311 I pg 255, 691 I pg 241, 298, 498 -- I pg 490 -- I, 254 -- I, 170 II, 668 --II, 286 -- I, 680 -- I, 353 - I, 238
>
> References to Vol. III; Elementals: pgs 227 - 236 - 238 - 442 - 451 - 473 - 474 - 588 - 592 - 567 - 571 - 589 - 589 - 590 - 496 - 588 - 594 - 566, 567 - 463 - 561 - 337

Elementals, in contemporary occult usage, are not to be confused with Elementaries - which are said to be "psychic remnants" left in the astral sphere after death." Elementals are "conscious ethereal entities, as invisible as ether ..." they are Nature Spirits, of countless kinds, from unsubstantial thought-forms down to invisible but atomic organisms. "They are everywhere, in the fire, in the water, in the earth, in the sky; each class existing in its appropriate sphere, just as men are on earth. Some are very friendly to men, some are hostile - not by will but by natural character: men and they don't tune in together" Some them can and do "communicate" with men - but this depends on the meaning attached to the word communication. Animals and trees and many common objects also 'communicate' with men - but in their own way. . . The statement of the Control (sup.) that they do not belong to the order of human evolution does not contradict the concept that ALL entities fulfill their own evolutionary process. It is also taught that some Elementals become men.

The excuse for the foregoing paragraphs, is simply to make clear the uselessness of hasty generalizing about the Green Men - or about any of the space people, or their powers and motives and intentions, or the Discs or 'saucers' and other visible craft - sprung from "the plurality of invisible universes".

MORE ABOUT VITAMIN C: (Letter from Assoc. Rev.J.H.L.

. . . The article on Vitamin C, pg. 19 of Round Robin XI- 3 (current), by Assoc. Gaston Burridge, was read by me with great interest. . . On page 14 of the June 1951 issue of the Chirogram, the Journal of the Los Angeles College of Chiropractic, you will find an article entitled "The Treatment of Poliomyelitis and other Virus Diseases with Vitamin C".

There is quotation of successful treatment by Fred R. Klenner, M.D. - Southern Medicine and Surgery; Vol. III, No. 7, July 1949; Charlotte, N.C. This article is continued in the July issue of the Chirogram, page 14. Both portions are entitled "A Compilation of Information for the Department of Bio-physical research, Los Angeles College of Chiropractic, under direction of Dr. Henry G. Higley, D.C."

Besides Polio there is mention of the successful treatment of Herpes Zoster, Chickenpox, Influenza, Virus Encephalitis, Measles, Mumps. In some cases massive intravenous or intramuscular injections were necessary. The article itself should be read. There is an appended bibliography and numerous medical authorities are quoted. Here are a number of significant quotations:

... Administration of one gram (1000 mg) of ascorbic acid (Vit. C) on each of two successive days produced a statistically significant reduction in the duration of the common cold." "In using Vitamin C as an antibiotic no factor of toxicity need be considered". (Note: material in The Chirogram is copyrighted).

Have you noted the article on page 8 of the current October issue of EXPOSE', 225 Lafayette St., New York 12, N.Y. entitled: Chemical Approach to Cancer appears to have Cured Many." First line of article: "A chemical approach to cancer held much promise this month though no news of the development has yet reached the public. The treatment technique is known as "Revici Cancer Control". This treatment, it seems, is sponsored by "The Institute of Applied Biology", which has recently purchased The Beth Davis Hospital, at 161 E. 90th St. in New York City. It would seem from this article that the treatment is quite successful.

J.H.L.

Nothing More to Worry About.

"In re the Hoxsey Cancer Clinic. This is just to tell you I have been back to Hoxsey's , had a check-up, and they said I have nothing to worry about "so far as cancer is concerned". It was a duodenum cancer.. In the tenth week of treatment I knew that the change was coming about, and I thought that it might interest you from the research standpoint. It is all wonderful, but I do still think that a combination of treatments, either Kriebiozen, Koch, Lincoln, with Hoxsey, is advisable in critical cases or those that do not respond within a few months. But that is because of the AMA attitude, as you know.

Sincerely - Frances S. . . . (Assoc.)
Webb City, Mo.

VITAMIN C AGAIN - and Polio - - Assoc. 6-8-0

Our correspondent sends us the following quotations from Make Your Garden Your Drug Store, with the information that the printing of this book "has been stopped by the AMA".

"The minds of many parents are filled with dread of Polio. A great deal of money has been collected to try to find some miracle drug which will cure the helpless victims, but very little is done along research in diatetics to try to find the cause and prevention of this crippler. A few outstanding doctors are proving the relation of this disease to a deficiency diet, but little attention is paid to it. The following are articles which appeared recently in newspapers:

(next page)

" ' Pasadena, Calif. -- Lack of vitamin C makes fatigued persons easy prey for infantile paralysis, according to Dr. Joseph C. Risser, bone specialist and President-elect of the American Academy of Applied Nutrition. Loss of vitamin C or lack of it in one's diet is dangerous, he declares, to bone health because the vitamin supplies caliogen, the intercellular material which deposits calcium in the bones'.

"'Science Editor William S. Barton, in the Los Angeles Times, reports that Dr. Fred R. Klenner stated that all of the 60 polio patients treated during the 1948 epidemic at Reidsville, N.C., with 1000 to 2000 mgm of vitamin C were well after 72 hours. The dosage varied according to the age of the sufferer. This vitamin was injected between the veins or muscles and the dose was repeated again two hours later if no immediate drop in temperature resulted, and again two hours later, continuing in this manner for 24 hours unless temperature dropped in the meantime. After the temperature dropped, it was given in the same manner every six hours for the next 48 hours. A few relapses occurred, but after resumption of the treat - ment for another 48 hours the relapsed patients recovered.

"' Ten years ago Dr. Claus Jungeblut, Columbia University bacteriologist, found in an experiment with monkeys, that six times as many monkeys were saved if vitamin C was used as when it was not used. Also they had more resistance to polio when the diet had been high in vitamin C before they were injected with the polio organism.

"' In the 1939 Year-book of the U.S. Dept. of Agriculture, titled Food and Life, we find this statement: 'In vitamin C deficiency the cells which produce intercellular substances undergo striking changes. The nutrition and structure of the teeth are affected very early in the absence of vitamin C intake. Later the tiny capillary blood vessels become weakened and cause hemorrhages throughout the body; the joints become swollen and the bones become porous and fragile. The symptoms are characteristic of the vitamin C deficiency diseases.

"'Surely with this knowledge available, more publicity should be given to the fact that polio is definitely linked up with a nutritional lack. Every mother should make it her responsibility to see that her children receive an adequate diet, rich in minerals and vitamins, which will lower their chance of contracting this disease"'

- end of quote -

"Guess we'll never know" - writes Assoc. 6-8-0 - "how many cases of polio our grandmothers stopped in the early stages by filling us up with hot lemonade and honey."

About the book mentioned, Make Your Garden Your Drugstore, Assoc. 6-8-0 adds: "I copied the entire book - no author was given - but failed to copy the publisher and date. But I do remember that it was published by Radiant Health, and I think the date was 1950. . ." Information about this will be welcomed by the BSR.

(As matters now stand, we look forward confidently to the day when NO book may be published or read except by permission of the AMA; when no article of food of any description may be purchased or offered for sale unless bearing the AMA stamp of approval; when none of the healing arts can be practised save by license and permit of this omniscient Greediness; when children may be conceived only after application and consent of medical authorities - and every occupation and industry will be regulated day by day by the same High Authorities. For do not all these things have bearing on physical health, and hence, are the sole concern of the medical profession? Is not this profession represented in its fullest flower and wisdom by the American Medical Association, at least by its ruling clique and cabal. ... But this fantastic nightmare is also a dream of things nine-tenths possible. .

TELONIC RESEARCH CENTER
P.O. Box 1654, Prescott,
Arizona

is now issuing a Research Bulletin (Vol.I, No.1), published quarterly. The staff of the TRB is headed by George Hunt Williamson. Rates: one year, $2.00; single issues .50 This first issue contains details concerning Dr. Williamson and the Division Heads, and present and proposed activities of the organization. "The TRC is a scientific approach" to the problems of the UFO, and will present documented evidence concerning them. Reports, clippings etc. should be sent to Thomas M. Comella, 20019 Scottsdale Blvd., Shaker Heights 22, Ohio.

The National Fluoridation News (anti-f): Associates interested in joining the opposition to this compulsory medication outrage should subscribe to this publication. Six to ten times per year. $3.50. Single, .35 2930 W.Grand Blvd. Detroit 2, Mich.

BEACON LIGHT HERALD - Pub. monthly by William Kullgren, Editor; Atascadero,Calif. The Nov.-Dec. issue has a courageous reprint from the Bulletin of the National Health Federation, concerning Gestapo methods in recent raids on offices of six Long Beach (Calif.) chiropractors. . . On a different subject- the "Word of Explanation from Ashtar" (pg. 47) is interesting and highly sensible. Single,.50

"Psychism" of Jonathan Swift. In No. 2, vol. XI of Round Robin (July-August 1955) we printed an article by Assoc. Jerrold E. Baker titled "Did Jonathan Swift Know About Saucers". It is interesting to note that the French publication COURIER INTERPLANETAIRE, edited by Professor Alfred Nahon, recently prints a similar comment:

"These very small beings" (from some of the "saucers") "were already known in 1752 through the psychic gifts of Jonathan Swift, who disguised his knowledge under the form of a story - Voyage of Gulliver to the Land of Lilliput. These beings possessed such keen perceptions that they were aware of all that took place on earth, even to men's thoughts, without any need for landing on the earth or of conversing with its inhabitants. That is why, when they make their periodical approaches to our earth in order to study us, they observe us in silence; they understand us but do not frighten us... "

Professor Nahon continues by saying in substance: 'The pilots of these interplanetary machines ('machines interstellaires') are beings very different from humans, although they are vertebrate mammals and humanlike in form. They are, however, of very small size. Their intellectual development is superior to ours and they have great vitality and a capacity for mechanical reaction superior even to that of insects, such as flies . . .'

Professor Nahon is of course speaking of special classifications of the space people - the dwarf-size beings often seen during the last few years in all parts of the world. I have referred to these on another page of this issue of CQC, in connection with the subject of Elementals. . . . It seems possible, in fact very likely, that the 'borders of manifestation' are being lowered - and that this has a two-fold aspect: (A) Entities from other planes, normally invisible to us, are able to reach our frequency levels and appear to us - and may do so unwittingly (B) 'Natural' or involuntary psychism is becoming more common - an expectable result of increased interest and attention to unusual happenings, a degree of apprehension etc. Such factors probably tie in with changing conditions of the globe and the solar system; the earth is said to be entering new regions of etheric densities and many physical conditions and supposed 'constants' are being affected. There can be no question about the actuality of the ESP faculties or the fact that such powers can be acquired; it is simply that these almost submerged levels of awareness are in process of appearance. ml

COMPREHENSIVE CATALOGUE)Illustrated) - of books and instruments . Issued by the British Radiesthesia Association, Dept. of Publications. 15 pages; free for postage only."This catalogue offers the pick of all British produced books and instruments, especially those recommended by the BRA.

Prices are marked in sterling and in dollars, but prices in dollars should be verified (by post office. At present about 7 shillings to $1.00).

The BRA will search for and obtain anything specially required. Instruments are also made to order. All checks, money orders, postal orders should be endorsed and made payable to the BRA. Cash should always be registered. Address the B.R.A. London, W.C. 1, England.

The British Journal of Radiesthesia, quarterly: by annual subscription, $1.50. Single, .40 -- Elementary Radiesthesia, Archdale: .60 -- Elements of Dowsing, Henri de France; $1.30 . . . and some 50 other items listed in this Comprehensive Catalogue referred to above - including correspondence courses - a list of pendulums with diagrams -- Wands and rods -- guaranteed "Witnesses".

Diagnostic instrument, complete. Price in the U.S., $106.00.

Transmitters, Pulsators, Polarizers, miscel. equipment. . . Books and pamphlets by Bruce Copen; also the "personally tuned pendulum"

All material above mentioned is described in the CATALOGUE, which should be consulted for details.

CLIPS & QUOTES publishes the foregoing in reply to many inquiries concerning elementary information and instruction in the field of radiesthesia. BSR Hdqrs canNOT supply such material, but the subject of radiesthesia is of great importance and the BRA is a highly dependable source

THE AMPLIFYING PENDULUM - by Elio Pasquini - 16 pgs - .60 -	BRA CAT.
THE AURA BIOMETER - John J. Williamson -- about 20 pgs	"
BIOMETRIC ANALYSIS of Flying Saucer Photographs -- 26 pgs	"
RADIATION TRANSMITTER HANDBOOK -- Bruce Copen -- 18 pgs.	"
The British Journal of Radiesthesia may be obtained by addressing	"

The Hon. Secretary, British Radiesthesia Association
BCM/ Radiesthesia, London W.C. 1, England.

RADIO-PERCEPTION - The Journal of the British Society of Dowsers, is published quarterly by the Society at York House, Portugal St., W.C. 2, Lon. Single, .50 About 150 pgs. Especially valuable for translations from French, Italian and other continental publications.

MARKHAM HOUSE PRESS, LTD., 31 Kings Road, London, S.W. 3, advertises itself as "the radiesthesia specialists" and "will be pleased to obtain ANY books or other publications desired" - a large order which Markham House comes close to fulfilling. Send stamped and addressed envelope for catalogue.

We call attention to a new book - THE USA TODAY - by Helen and Scott Nearing "Extensive journeys and firsthand observations, commenting on their meaning and offering conclusions regarding present day trends in the domestic and foreign affairs of the United States.". Stiff paper cover, 280 pages. Money refunded if not satisfied. Pub. by Social Science Institute, Harborside, Maine. (Three copies for $5.00).

DOWSING - HOW TO DOWSE - HOW TO USE A PENDULUM are the titles of three books now offered by Health Research, Lafayette St., Mokelumne Hill, Calif. Ask for their advertising pages.

THE GERSON TREATMENT FOR CANCER:

Assoc. Mrs. H.M. Graham, Box 14, Ruidoso, New Mexico, sends us a copy of an article bearing this title and published in PREVENTION for August 1955. Prevention is a monthly publication of the RODALE PRESS, Inc. Emmaus, Pa. We are obliged to present only the substance of this article. Interested readers should write to THE GERSON FOUNDATION FOR CANCER TREATMENT, INC., 815 Park Ave, New York, N.Y. and ask for Dr. Gerson's three booklets.

"Max Gerson, M.D. believes that cancer can be prevented and cured. He cures cancer by diet, which is a dangerous thing to say in present-day America. Yet there seems to be no doubt about the healing of both terminal and incipient cases by this means. We (the interviewer) talked to many present and former patients.

'The young woman Charlotte Luchterhand, of 5918 Schubert St.,Chicago, was a terminal case when she came to Dr. Gerson. In five weeks she was well enough to go home, where she carried out the rest of the cure. Harry Bess of 2460 Kensington Ave., Philadelphia, Pa., was given six weeks to live. Dr. Gerson advised him that there was the merest chance but offered to try. In three weeks he showed great improvement, has now been under treatment for seven months - and the cancer is gone. He wants the chance to tell other people what happened to him. Talking to such people, and to Dr. Gerson and his staff is a revelation.

'The Gerson treatment for cancer is mainly dietary. No X-ray, surgery, or radium. The diet is low in animal protein, high in vegetables and fruits. In Dr. Gerson's words: "the liver is the center of the restoration process in those patients who improve strikingly... If the liver is too destroyed, then the treatment cannot be effective. It is generally known that in cancer all the various metabolic systems are impaired. Diet and medication serve the purpose of restoring potassium and related minerals to the tissues, and of reconveying sodium and its group out of the cells and into the circulatory fluids, the connective tissues and other tissues where they belong. The retentive surplus of sodium must be eliminated. Only on this basis can further recovery of the organs take place".

'The diet forbids alcohol, coffee, tobacco, refined foods such as white flour white sugar and anything made from them, canned or frozen foods or foods processed in any other way. No fats, no oils, no salt substitutes -- finally, no hair dyeing-- relapses have occurred after hair dyeing. Pressure cookers must not be used, or any aluminum cooking utensils. Later in the treatment proteins are gradually added. Potassium salts are taken in the juices of fruits and vegetables which are naturally high in potassium - many glasses of these juices every day. Thyroid tablets and iodin, vitamin B and liver are given

'A patient well on the road to recovery can follow the diet at home, tho it is somewhat difficult from a practical point of view. The vegetables and fruit must be raw, fresh, and freshly juiced. No departure from the diet is permitted.

'But Dr. Gerson merely waves his arm around the room and says: Ask my patients. We did, and came away convinced that he is curing cancer in a way little short of miraculous - and also that those of us who want to prevent cancer are on the right track. It is interesting to note that other degenerative diseases yield to the diet treatment... Mr. Bess found that his inoperable kidney stones disappeared on the Gerson diet. Long standing cases of arthritis and heart disease are cured along with cancer,

'So far as we know , Dr. Gerson has never rejected a cancer patient. But he has far more patients than he can handle, even working '28 hours per day'. He wants other doctors to learn about his treatment and use it. If a cancer patient's local doctor can be persuaded to write to Dr. Gerson, the patient can be treated

at home and need not go to New York. The finest thing a PREVENTION reader can do to help along the good cause is to write to the American Medical Association, The American Cancer Society, your local congressman, to the magazines you read, and to your newspaper, telling them all about the Gerson treatment and asking WHY is this treatment not being used widely across the land. WHY is it not taught in medical schools, and WHY is it not investigated by the American Cancer Society and the American Medical Association? *

(end of abstract from PREVENTION article)

---

* There are now several methods of treating cancer which are giving excellent results even in the most serious terminal cases; the best known being the KOCH, the HOXSEY, THE LINCOLN, the DROSNES-LAZENBY, the HETT, the NICHOLS . . . some others, mentioned in Round Robin by Assoc. Mrs. H.M. Graham, in a former article. None of these is used or sanctioned by the AMA - an organization which itself has nothing to offer. As to the WHY'S posed by the Prevention writer I have no provable answers - but would it be a propos to remark that there are probably ten million cancer cases in the United States - and that it costs about $10,000 (or what have you) to die of cancer in the U.S. (not to be cured of it). And how much is 10,000 times 10,000,000 ? - dollars, that is? A sizable, permanent backlog, certainly - for any set-up that can cash in on it. (No, one does not like to say such things - any more than the A.M.A. likes to hear them).

BOOK DONATIONS: A number of our Associates have given us substantial help, by donating used books (in the field of BSR interests) - with permission to sell and to apply the proceeds to BSR expenses.

Our present stock of such books is low - and we hope you will not forget this means of helping us. Do you have books you no longer need, but which are practically unsalable. Send them along to us and make yourself shelf room.

Remember that a subscription to CLIPS & QUOTES and/or ROUND ROBIN makes the best kind of Christmas gift - one which keeps coming all year through, and with information of a kind not easily found elsewhere. $5.00 for six issues of Round Robin, or 12 issues of CQC.

ATTENTION OF ALL BOOKWORMS: In ordering from our BOOK CLEARANCE LIST, please be sure to select from the latest list sent you. We cannot stock books - which means that we seldom have more than one copy of any given work. We will accept orders, but only to be filled when or if the book wanted comes in. Orders have to be filled in their precedence. We dislike to disappoint anyone, and want to make our procedure clear.

Finally, please be careful to write names and addresses plainly, and put your name at least on all separate items and newspaper clippings - and the name and date of publication. -- Yes, we still want clips, and read them carefully, but we cannot print many of them, or even say thank-you individually to everyone who sends them in.

May the Gods prosper all that you do - which is DI Vortant Bene Quod Agas - which we write sometimes as

D I V O B E Q U A
